

DEFINE – PROBLEM STATEMENT

Implement Client Script & UI Policy (Incident) — ServiceNow

Problem Statement

Incident records require consistent and accurate data entry for effective triage, routing, and resolution. Manual checks and dependence on user awareness can lead to incomplete, inconsistent, or incorrect information. This can affect reporting accuracy, SLA compliance, and overall service quality.

Defined Need

The Incident form needs UI-level conditional field behavior and validation to guide users during data entry, automatically apply required values, and prevent incorrect records from being submitted.

Objective

Use ServiceNow UI Policies and Client Scripts to enforce data integrity on Incident records by dynamically making fields mandatory, auto-populating values, controlling field behavior, and preventing submission when required conditions are not met.

Project Focus

Improve Incident data quality through dynamic form controls, validation, automation, and controlled field updates.
